What moved the markets

Investors were largely focused on two issues this month:

- 1) central bank policy in the wake of last month's "Brexit" vote;
- and 2) the Q2 earnings season.

Economic developments south of the border were noticeably more positive, demonstrating signs of a resilient U.S. economy.

On the former, most policymakers opted to hold off on new monetary stimulus measures while they gather data to better assess the prospects for economic growth and inflation. (For further detail, please read the sections below). Meanwhile, the Q2 earnings season in the U.S. was just over half way completed by month's end. Thus far, over 70% of companies have reported earnings above expectations, while 50% have reported revenue above expectations. Based on the reported and expected results over the next few weeks, Q2 earnings are expected to decline 3.0% year over year according to Thomson Reuters, which is slightly better than the decline of 3.8% that was expected at the beginning of July. Most of the growth has been driven by the Telecommunications, Health Care, and Consumer Discretionary sectors.

Several positive economic reports in North America helped to offset the negative sentiment from the "Brexit" vote and supported an increase in North American equity markets. In Canada, inflation and retail sales data beat economists' expectations, while employment data was weaker than expected, a near record trade

deficit was reported, and a steeper than expected decline in GDP were the lowlights during the month. Economic developments south of the border were noticeably more positive, demonstrating signs of a resilient U.S. economy. Nevertheless, the GDP growth reading fell short of expectations.

Despite mixed investor sentiment, North American equity markets reached record highs this month, while continued demand for fixed income drove Canadian and U.S. government bond yields to record lows. The S&P/TSX rose by 3.9%, with rallies in the Information Technology, Industrials and Materials sectors of 9.2%, 7.7% and 6.9%, respectively. The Energy sector was the only one that fell, albeit barely, by 0.4%. Overall, 9 of 10 sectors finished the month in positive territory.

In the U.S., the S&P 500 closed the month 3.7% higher, with 7 of 10 sectors ending the month in positive territory. The Information Technology and Materials sectors gained 7.8% and 5.0%, respectively, while the Energy and Consumer Staples sectors fell by 2.0% and 0.9%, respectively.

U.S. retail sales rose 0.6% in June on a month-over-month basis, considerably higher than the 0.1% expected by economists and the 0.2% recorded in May.

Fixed Income-Specific Developments

Overall, business sentiment in Canada was subdued even prior to the unexpected “Brexit” vote, according to the Bank of Canada’s (BoC) Q2 Business Outlook Survey released this month. Despite the weak employment report and a near record trade deficit, the BoC held the overnight rate unchanged at 0.5% this month. The BoC made downward revisions to its GDP forecast for the next two years and is now projecting Canada’s output gap to close “towards the end of 2017”, slightly later than its previous forecast. Economic data released following the BoC’s rate decision was mixed with Canadian CPI up 1.5% in June on a year-over-year basis, higher than the 1.4% expected by economists, and primarily driven by increases in passenger vehicle and home prices. Meanwhile, Canadian retail sales rose 0.2% in May on a month-over-month basis, beating economists’ estimates for no gain, primarily driven by an increase in gasoline sales and partially offset by a decline in car sales. GDP data released at the end of the month saw a month over month GDP drop of 0.6% in May. This decline was largely as a result of the Alberta wildfires, and represented the biggest drop in GDP since 2009.

In the U.S., the minutes from the June FOMC meeting suggested trepidation on the part of Fed officials with respect to tightening policy ahead of the “Brexit” referendum. Despite the caution, the economic data was largely positive, with employment, inflation, retail sales and manufacturing data indicating improvements in U.S. economic conditions. Non-farm payroll data revealed 287,000 new jobs were created in June, significantly more than the consensus estimate of 180,000. The unemployment rate rose to 4.9%, up from 4.7%, but was driven by an increase in the participation rate. U.S. CPI rose 0.2% in June on a month-over-month basis, representing the fourth consecutive month of positive inflation. U.S. retail sales rose 0.6% in June on a month-over-month basis, considerably higher than the 0.1% expected by economists and the 0.2% recorded in May. The Fed held the Fed Funds rate at 0.5%, as expected. The Fed’s statement accompanying the decision noted that “near-term risks to the economic outlook have diminished” following recent improvements in employment data. Yet, inflation concerns remain and will be closely monitored for movement towards the 2% target. The month of July ended with a disappointing U.S. GDP report as a reduction in inventories and lower business and residential investment held second quarter GDP to 1.2%, which was considerably lower than the 2.5% expected by economists.

Global Developments

Following the release of the BoE's semi-annual Financial Stability Report this month, Governor Mark Carney warned that "there is the prospect of material slowing" in the U.K. economy. This risk was best reflected in the significant decline in the British pound, which sat near a 31-year low. To help counter the slowdown, Mr. Carney announced a reduction in the capital requirements for banks, a move aimed at boosting both corporate and consumer lending. Furthermore, the Governor noted that "The Financial Policy Committee stands ready to take any further actions deemed appropriate to support financial stability". Despite no change to its interest rate policy in the month, the BoE signaled that stimulus may be more likely in August. In its first rate decision following the "Brexit" vote, the ECB kept its main refinancing rate and deposit facility rate on hold at 0.0% and -0.4%, respectively, while leaving its asset purchase program unchanged. In a statement accompanying the decision, the ECB noted that "The Governing Council continues to expect the key ECB interest rates to remain at present or lower levels for an extended period of time, and well past the horizon of the net asset purchases." The Bank of Japan left its benchmark interest rate unchanged at the end of the month, and announced only a modest increase in stimulus. This disappointed the market, as two thirds of economists surveyed had predicted a rate cut into further negative territory.

After reaching a 2016 high of \$52.68 per barrel on June 8th, the price of WTI oil dropped 14% to \$41.48 per barrel this month. The decline followed a report issued by the Energy Information Administration indicating that crude inventories in the U.S. rose 1.67 million barrels in the third week of July, a significant variance from the 2 million barrel decline expected by markets. Gold ended the month at \$1,351 per oz., after climbing to a two-year high of \$1,367 per oz. on July 8th, while U.S. 10 Year Treasury yield ended the month 3 bps higher.

World markets

July month-over-month and year-to-date performance

For the month of July, global markets performed well across the board. Across North and South America, S&P 500 and S&P/TSX were up 3.7% and 3.9% respectively, while Brazil's Bovespa rose by 11.2%. In Europe, Germany's DAX and U.K.'s FTSE increased by 6.8% and 3.4% respectively. In Asia, Japan's Nikkei was the clear winner closing the month up 6.4% while Hong Kong's Hang Seng and India's Sensex both increased by 5.3% and 4.1%, respectively. Lastly, Australia's S&P/ASX 200 finished the month 6.3% higher. Overall, the MSCI World Index increased by 4.2% for the month and is up 5.3% for the year.
