# Post-pandemic strategy

Doug Clark, CFA Vice President, Investment Advisor Doug.clark@rbc.com Phone: 905-764-5561 Fax: 905-764-7324 Toll-Free: 1-800-268-6959

## Agenda

- 1. Market performance
- 2. Asset allocation
- 3. Business sector overview

## Planning for a post-Pandemic investment strategy

- The health crisis posed by the pandemic will be dealt with by a combination of better treatment and ultimately a vaccine will reduce the economic impact over the next six to eighteen months, thereby permitting more normal economic activity
- After the market crash in March of 2020, the very strong fiscal and monetary support provided comfort to investors that worse case economic outcomes were unlikely
- The market has responded with an equally swift rally across most asset classes with the indexes recovering most of their losses
- We are in an environment that no investor has been in before so we need to remain cautious and humble
- The explosion of government debt and the central banks ability to keep rates low for longer to enable a full economic recovery is a new risk for investors

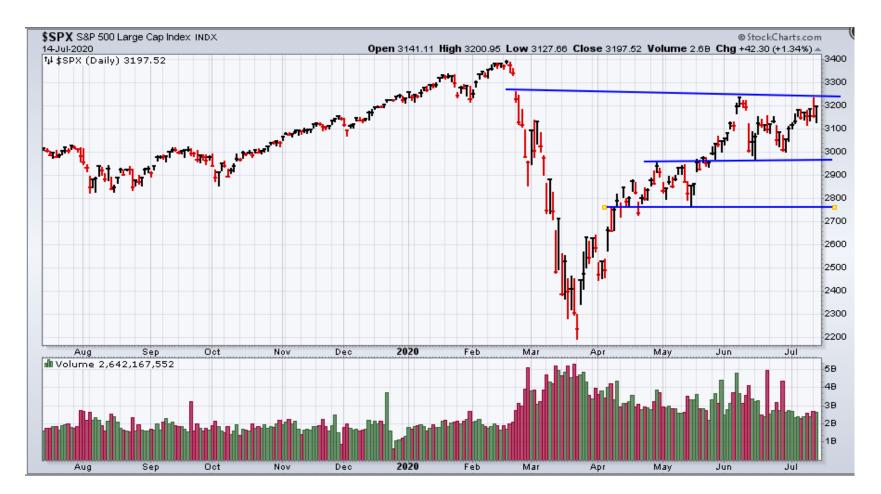

#### Our base case

- Our base case however is that the economic recovery will be longer and unequal
- We view the current market as being divided into three groups
  - 1. Stocks whose business models are either unaffected or improved by the Pandemic but where valuations are at all time highs (e.g. Netflix)
  - 2. Stocks that remain severely depressed because their recovery is uncertain and earnings as a basis for valuation decisions are unknowable (e.g. Airlines Cruise ships)
  - 3. Stocks that have been affected by the pandemic but who have very strong business models but are not popular with "fast money" but also still have attractive valuations
- We have been focused on the third group as the most attractive and rebalance our portfolios around these names

#### The market crash of 2020 was remarkable in the speed of the sell-off as in the case in the recovery

S&P500 Large Cap Index July 14, 2019 – July 14, 2020 Source: Bob Dickey, Strategist, PCG Research Technical, RBC Wealth Management US, StockCharts.com

#### Almost like Bitcoin, popular stocks whose business is viewed as immune from the economic fallout or the pandemic have seen the valuations gone parabolic

#### **Beware of Crowds**

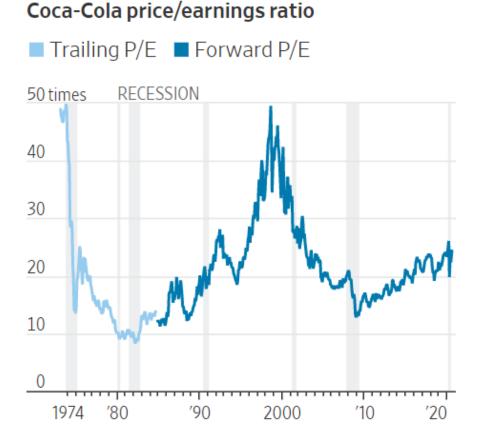

"Some stocks and stock groups have made some large moves to the upside during the market advance of the past three months on the anticipation of potential earnings gains as a result of their advantageous positions during the COVID-19 crisis. Many of these stocks have been prominent in the news and have attracted more investor interest as they have moved up sharply in many cases. Often, the sharp advances can peak when the buying interest falls off, and the resulting pullbacks can be as sharp as the moves were on the way up. When a particular investment becomes popular and well-advertised it is also late in the rising trend and then has a higher risk of change, and we think that it is important not to be influenced by stories of recent success and instead look for those investments that are earlier in their bullish trends which is really the common goal for most investing."

- Bob Dickey, Strategist, RBC Wealth Management US

#### Coca-Cola

Note: Monthly data Source: Refinitiv Looking back at history at stocks that "everyone had to own" is instructive. Twice in its history, the stock traded over a 40x P/E ratio and thereafter was a terrible investment.

## Top 10 S&P 500 holdings

| Ticker | Name               | Market Cap (in \$ billions) | % of S&P500 |

#### S&P500 vs. TSX Composite return by sector

Looking at longer term sector performance, healthcare, technology and consumer have delivered impressive returns. Energy, materials and the TSX in general have not. Real estate as an asset class faces an uncertain future which we view as too difficult to forecast.

## Risks

- Adjustments to post-pandemic world
- Trade deals & Supply chain disruptions
- Inflation
- Central bank's ability to keep rates low
- Political and taxation

#### Asset allocation

- Over the last 20 years, 60/40 equity & bond portfolios generate less and less return
- Equities remain the best asset class, despite near-term volatility
- Equities can offset the new risks, but asset allocation is important

The Biggest Question facing investors making asset allocation decisions: are long-term bond returns repeatable, or is there too much risk and not enough return?

For most bond classes outperformed the TSX the last ten years?

**Consumer:** We like the consumer sector but valuations are too stretched

**Financials:** Only the best – JP Morgan, Bank of America, Blackstone and Royal Bank of Canada

**Utilities:** We should use utilities as bond substitutes

#### Underweight sectors

WTI Historical Price Performance Since 1946 Source: Macrotrends.net

- Energy
- Materials
- TSX and Canadian Banks

Longer term, investing in commodities and commodity related stocks has not proven to earn a meaningful return. Oil in particular faces longer term secular issues. We avoided oil in the last ten years and continue to believe this is the best strategy for investors.

#### TD Bank vs. Bank of America

Currency risk should not impact long-term investment decisions – consider TD Bank vs Bank of America

|                                | TD Bank        | Bank of America |                                 | Performance Metrics |                 |

## Currency

- Central bank record printing and shifting views on modern Monetary theory
- Potential weaknesses in the Canadian dollar/economy. Given dependence on oil and foreign investors, difficulty in economic recovery may face the bank of Canada to watch the currency devaluation.
- King dollar

#### CAD to USD historical chart

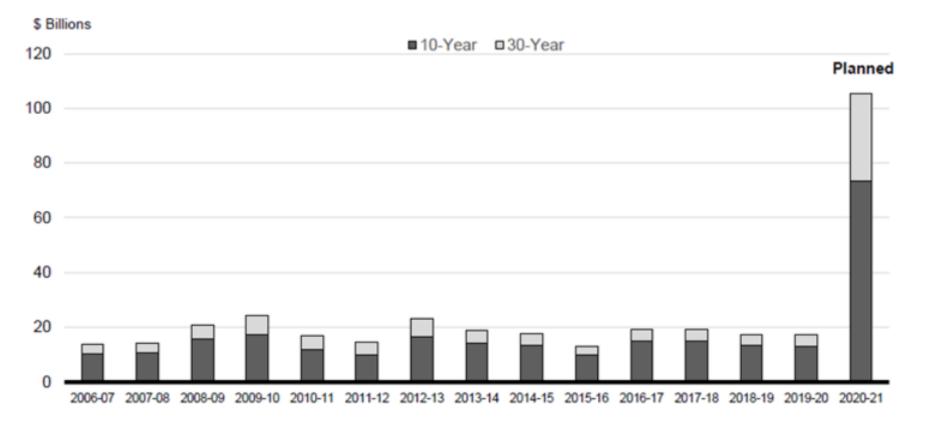

Looking back 40 years, the Canadian dollar is only slightly higher than the long-term average. The peak weakness in the C\$ FX rate in the late 90s to early 2000s is muted with low energy.

CPI vs Gold Yearly Changes

## The long run

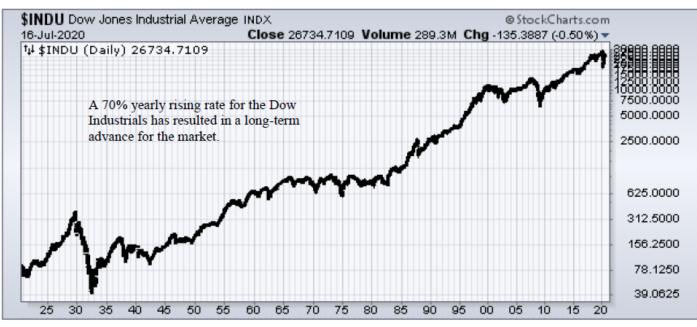

Chart courtesy StockCharts.com and RBC Wealth Management

Dow Joes Industrial Average Index July 16, 1920 – July 16, 2020 Source: Bob Dickey, Strategist, PCG Research Technical, RBC Wealth Management US, StockCharts.com

"We see many statistics that are used to describe the market in historical terms but we find many of these numbers to be either too short-term or focused on parts of the market that are too narrow to provide a clear picture of the trends. Our preferred view is one that takes in all the market cycles over the long term that includes many different past situations. The past 100 years has seen many changes in the world and over that time the Dow Jones Industrials have risen 70 of those years which is more frequent than many would surmise. That suggests to us that the probability of any year being up for the stock market is around 70%. It also means that 30 of the past 100 years were down. Out of those 30 down years, 13 were down less than 10%, as we saw most recently in 2018 when the Dow was down around 5% for the year. That leaves just 17 years out of the past 100 that were down more than 10%, and yet these are the periods we tend to worry about most of the time. Over time, these down periods become lost in the longer-term trend of the rising stock market that is once again up to near all-time high levels. So over the near term we can get excited and concerned about what the future may hold, but statistically, the stock market appears on our side." - Bob Dickey, Strategist, PCG Research Technical, RBC Wealth Management US
