What moved the markets

Several positive economic reports in North America helped offset negative sentiment surrounding political turmoil in Washington that could impede the Trump administration's efforts to pass tax and health care reform. U.S. Treasury yields fell as skepticism mounted about the President's ability to push through his 'pro-growth' policies. The U.S. 10-year yield ended the month close to its 2017 lows.

In Canada, the Bank of Canada kept the overnight rate unchanged at 0.50% and reiterated its concerns about the uncertainties outlined in the April Monetary Policy Report. More specifically, U.S. tax and trade policy as well as the long term implications of high domestic household debt levels. Canada is now one of the few major industrialized countries with private, non-financial debt exceeding 200% of GDP. Moody's downgraded the Big Six Canadian banks by one notch based on the credit rating agency's macroeconomic assessment. Moody's noted ongoing concerns that expanding levels of private debt, fragile household balance sheets and elevated housing prices leave consumers and Canadian banks more vulnerable to downside risks. The Canadian dollar was impacted by the negative sentiment and touched a 15-month low versus the USD in early May.

Equity markets in North America were mixed in May. The S&P/TSX moved down 1.3%, with rallies in the Healthcare, Industrials and Technology sectors of 7.6%, 3.3% and 3.2%, respectively offset by declines in the Energy sector of 4.3%.

In the U.S., the S&P 500 closed up 1.4%, with most sectors ending the month in positive territory. Markets were led by the Technology and Utilities sectors which gained 4.4% and 4.2%, respectively, while the Energy sector closed down by 3.4%.

Fixed Income-Specific Developments

The trend of stronger Canadian economic data continued in May. Canadian GDP rose 3.7% in Q1 on an annualized basis, this fell short of the 4.2% expected by economists, but builds on the 2.7% and 4.2% increases in Q4 and Q3 of 2016, respectively. Household spending remained strong and business investment was also a significant contributor to Q1 growth. Retail sales for the month of March rose 0.7%, which is above consensus estimates for a 0.3% increase. February's retail sales were revised higher from a 0.6% drop to only a 0.4% decline. Another bright spot was the Markit Manufacturing PMI which increased to 55.9 in April from 55.5 in March. This was its seventh consecutive gain and its highest value since April 2011. Employment data was more mixed as the Canadian economy added 3,200 jobs in April, weaker than the 10,000 gain expected by economists. A more positive aspect of the jobs data was the fact the unemployment rate declined to 6.5% from 6.7%. Wage growth remains weak with year-over-year growth in hourly wages declining to its lowest level on record at 0.5%. The lack of wage growth continues to highlight a labour market with some slack remaining and this is limiting inflationary pressures. The Bank of Canada's three core inflation measures, CPI-trim, CPI-median and CPI-common, which have been adopted to smooth transitory effects and help the Bank of Canada assess trends in underlying price levels, declined to an average of 1.4% from 1.5% in March. The benchmark 10-year government of Canada yield ended the month at its lowest level since mid-November at 1.41%, but the market is pricing in a probability of approximately 25% of an interest rate hike by the end of 2017. South of the border, the Federal Reserve kept rates on hold and the Federal Funds target range remained 0.75 – 1% as expected. The minutes from the May FOMC meeting revealed that numerous Fed officials had suggested that economic projections warranted a rate hike. Continued strength in U.S. economic data raised the probability of a rate hike to nearly 90% at the June meeting. Another aspect of the current Fed tightening campaign that investors will be watching is the size of the Fed's balance sheet. The May minutes revealed the Fed could begin to shrink the size of its balance sheet by ceasing the process of reinvesting bond maturities. The nonfarm payroll report showed that the U.S. economy added 211,000 jobs in April, above expectations of 190,000, but this beat was offset by the fact that job gain figures from previous months were

revised slightly lower. Headline unemployment fell to 4.4%, which was the lowest since March 2007. Average hourly earnings were a source of disappointment as the year-over-year growth rate in this measure slowed to only 2.5% versus 2.7% in March. ISM Manufacturing fell short of consensus, coming in at 54.8 versus expectations of a 56.5 reading. Headline CPI increased 0.2% month over month in April after a 0.3% drop in March, which was the biggest decline in more than two years. On a year-over-year basis, both headline and core CPI are within 20 bps of 2%. The Fed's preferred inflation measure, core PCE, was in line with the consensus forecast at 1.5% and down from 1.6% in the previous month. FOMC participants still expect inflation to reach the 2% target and view the recent softness as temporary. U.S. GDP was a bright spot relative to expectations, rising 1.2% in the 1st quarter versus the forecast of 0.9% growth and better than the 0.7% recorded in the 4th quarter of 2016.

Global Developments

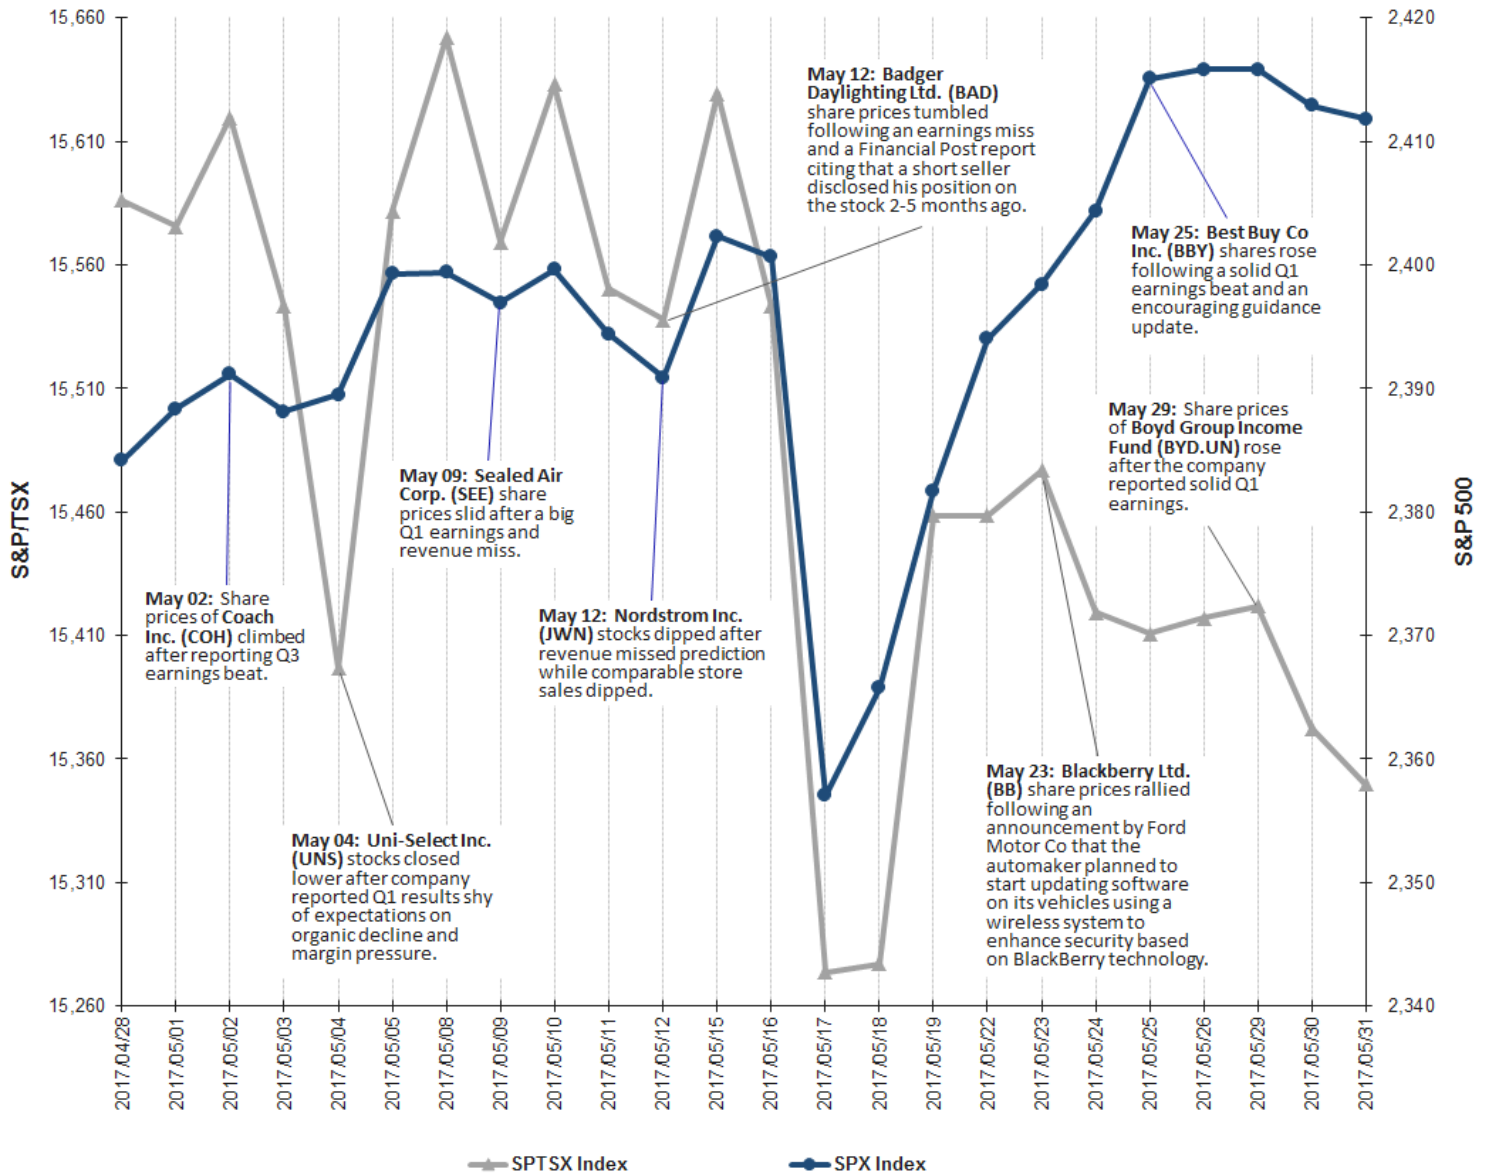

Economic data out of Europe continues to surprise to the upside. Euro area composite PMI for May was unchanged at 56.8, which was the highest monthly reading in six years. Eurozone GDP grew at a 0.5% pace in the first quarter, which was in line with expectations. In Germany, exports increased 0.4% in March to a record high of €118 billion. Imports also surged 2.4% to €93 billion making it the best month for both imports and exports for the Eurozone's largest economy. Exports in the region also surged to the highest level since 1999 at €202.3 billion. As was the case in North America, inflation data fell short of expectations, easing to 1.4% in May from 1.9% in the previous month, while core inflation softened to 0.9% from 1.2%. The soft inflation data, which remain well below the European Central Banks target of 2%, also eases some of the pressure on the ECB to start scaling back its €60 billion per month quantitative easing program in the near term and officials maintain a cautious tone on growth in the region.

In China, official manufacturing PMI came in slightly higher than expected at 51.2, the tenth consecutive month of growth better than consensus estimate of 51, while service PMI ticked up to 54.5 from 54 in April. China's exports increased 8% in April, lower than the 11.3% expected, while imports increased 11.4%, also less than the 18% consensus estimate.

OPEC and non-OPEC countries met during the month and agreed to extend current production cuts until March 2018. Crude oil prices declined to a 6-month low prior to the meeting in Vienna, before recovering and ending the month down just 1.7% at \$48.32 per barrel. Gold ended the month at \$1272 per oz unchanged from the beginning of the month. The yellow metal held firm near its 2017 highs despite rising probability of a Fed hike at the June meeting.

World markets

May month-over-month and year-to-date performance

For the month of May, most global indices ended in positive territory. In the Americas, the S&P 500 rose by 1.4%, while the S&P/TSX and Brazil's Bovespa fell by 1.3% and 4.1%, respectively. In Europe, Germany's DAX and U.K.'s FTSE moved higher by 1.4% and 4.9%, respectively. In Asia, Hong Kong's Hang Seng and India's Sensex closed the month up 4.8% and 4.1%, respectively and China's Shanghai Index closed the month down 1.1%. Japan's Nikkei closed higher by 2.4% while Australia's S&P/ASX 200 closed lower by 2.5%. Overall, the MSCI World Index increased by 10.5% YTD.
