# The Chart Mixer

A collection of interesting market, economic and entertaining data shared through charts and graphs.

**Innovation adoption timeline** (see chart below from [J.P. Morgan](#)): “The exhibit below offers a timeline of many innovations that we now take for granted and the time it took for them to achieve a 75% adoption rate, signifying ubiquity.”

**UBS Global Wealth Report 2024** (see chart to the right from [UBS](#)): “In simplified terms we can assert that in markets where median and average wealth growth is similar, such as the U.S. and the U.K., all sections of society have grown their wealth pretty much in lockstep, without a significant change in the distribution of wealth within the population. In other words, any equalities or inequalities that existed before have stayed roughly the same across all wealth brackets.”

All data in USD, as of 2023 (per adult)

**Top 25 in average wealth**

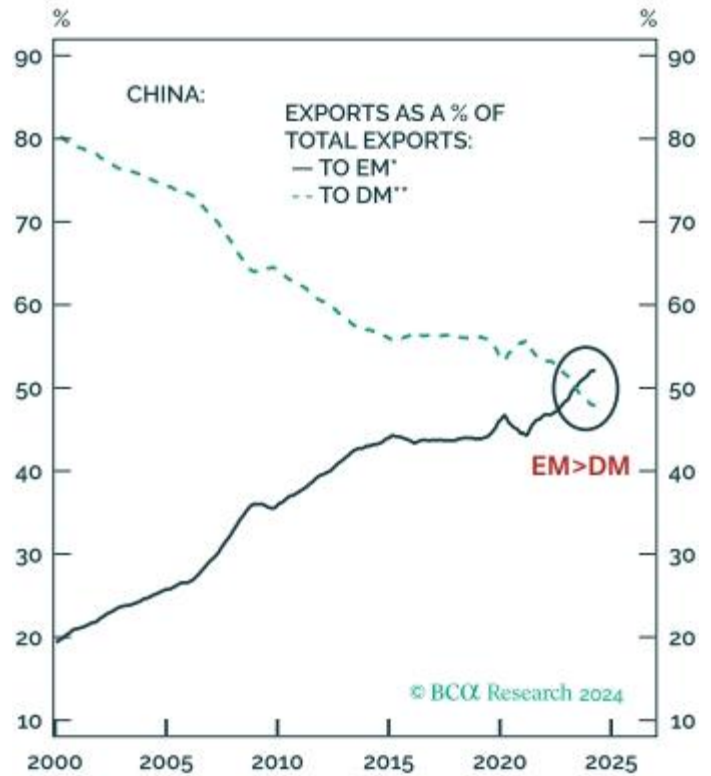

Switzerland	709,612	1st
Luxembourg	607,524	2nd
Hong Kong SAR	582,000	3rd
United States	564,862	4th
Australia	546,184	5th
Denmark	448,802	6th
New Zealand	408,231	7th

Korea	95,872
Ireland	95,459
Qatar	92,789
Finland	87,878
Sweden	82,864
Slovenia	81,195

China has reduced reliance on advanced economies (see chart to the right): “China’s trade patterns have changed substantially over the past 15 years. Chinese shipments to the U.S. have dropped from 30% of its total exports in 2000 to 16% now. Meanwhile, China’s shipments to developing economies have risen from 20% of total exports in 2000 to 52% now. Exports to the U.S. and Euro Area make up 3% and 2.5% of China’s GDP, respectively. By comparison, Chinese exports to all developing economies account for 10% of its GDP. The point is that China has been successfully diversifying its export markets for many years. For some time, China has not been reliant on the West in general and the U.S. in particular to buy its products and/or finance its manufacturing capacity buildup.”

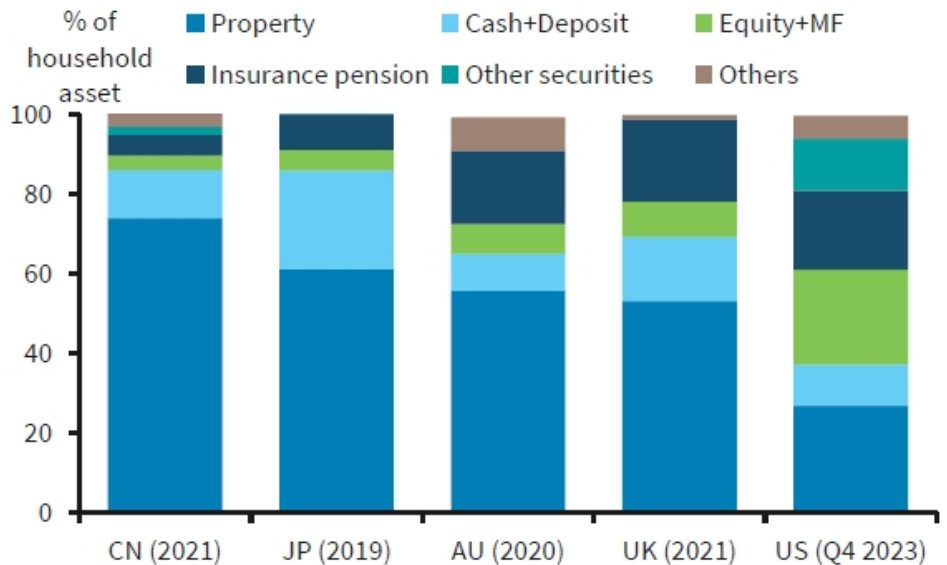

### China's Trade Pivot

NOTE: HONG KONG'S EXPORTS ARE INCLUDED IN CHINESE EXPORTS;  
 TAIWAN IS CLASSIFIED AS AN ADVANCED ECONOMY AND KOREA IS CLASSIFIED AS AN EMERGING ECONOMY;

Why Chinese consumer confidence remains downbeat (see chart to the right): “The property downturn has resulted in massive wealth destruction. Housing assets made up ~70% of Chinese household wealth in 2021, versus ~65% in Japan (2019) and ~25% in the US (Q4 23). The existing home price data reported by Centaline Property show even the more resilient tier-1 cities saw a ~30% decline on average from their peaks in mid-2021. Applying that conservative loss rate across China’s ~USD60tn residential property market as of 2021—the high-water mark—generates wealth destruction of an estimated USD18tn, which is equivalent to an entire year of Chinese GDP, or 8 years of 2023 total household savings for China’s 1.41 billion population. Another yardstick: the asset value so far destroyed by the property slump is 1.8 times the total market cap of China’s equity market (~USD10tn).”

**GenAI: Risk of underinvesting vs. overinvesting** (see chart below from the [Wall Street Journal](#)): “Apps like OpenAI’s ChatGPT have attracted hundreds of millions of users, but relatively few people are paying for premium versions and businesses are still experimenting with how generative AI can increase their productivity. Nonetheless, the biggest tech companies are putting record amounts of money into capital spending. ‘The risk of underinvesting is dramatically greater than the risk of overinvesting,’ Sundar Pichai, chief executive of Alphabet, said on an earnings call in July. The question is when, and even whether, all those investments will pay off.”

**Overall capital spending, quarterly**

**Inflation blame game: Where are the price gouging grocers?** (see chart to the right from [Bloomberg](#)): “An examination of grocery stores’ profit margins over the past few years shows they’re more or less flat. The straightforward interpretation is that stores were raising prices to preserve margins in the face of higher costs and supply-chain disruptions – not taking advantage of an inflationary episode to gouge consumers. Restricting companies’ ability to adjust prices hinders shifts in supply and demand that are essential for keeping the economy running and prices stable.”

## Where Are the Gouging Grocers?

Food prices surged after the pandemic. Profit margins at major US supermarket chains did not

**Data centre electricity consumption** (see chart below from the [Wall Street Journal](#)): “Tech giants swore just a few years ago that they would slash their carbon emissions. Then they got swept up in artificial-intelligence mania. The scramble to build AI data centers that require massive amounts of energy is upending the industry’s climate pledges and spurring it to work with power producers to speed development of new clean-energy sources. Tech companies are already the biggest purchasers of wind and solar power, but it isn’t enough to meet the round-the-clock needs of data centers. **A search on a generative AI platform like ChatGPT uses at least 10 times the energy as a standard one on Google. Emissions from the global build-out of data centers between now and 2030 could equal about 40% of the entire U.S. economy’s annual emissions, Morgan Stanley estimates.**”

**Canadian median household income** (see chart below from [The Globe and Mail](#)): “Real median wages of Canadians have barely changed since 1976. Analysis of data from the OECD and Statistics Canada on the way people spend their time shows that Canadian couples now work so much that they have a full eight months less time to spend with their children before they turn 18, than their peers in other rich OECD countries and G7 economies. Indeed, Canadians have lost more than 10 per cent of their leisure time since 1988.”

Roughly a third of younger adults live at home (see chart below from [Bank of America Institute](#)): “The share of 18- to 24-year-olds that live at home (or attend college) remains large at 23%. Further, there has been a rise in the share of adults aged 25 to 34 living at home with their parents. In 2023, 10% of this subset of the population lived at home, double the rate in 1960, but down slightly from the peak in 2020 during the pandemic.”

**Exhibit 10: There has been a notable rise in the share of adults aged 18 to 34 that live at home since 1960**
