WHAT MOVED THE MARKETS

Risk was back on this month as better-than-expected economic data and a rally in a number of major commodities contributed to improved investor sentiment. Reflecting this improvement, volatility in both equity and bond markets reached year-to-date lows. Furthermore, most major equity indices and North American benchmark government bond yields recovered and reached year-to-date highs. Corporate earnings also contributed to the more upbeat tone as ~75% of S&P companies have posted higher-than-expected Q1 earnings. Revenue beats are in-line with the long-term trend, despite some high profile misses. Finally, central banks around the world reaffirmed their commitment to historically low interest rates. Many repeated their recent rhetoric about concerns regarding lower growth and poor inflation prospects in developed economies.

North American indices were generally positive this month. The S&P/TSX posted a 3.7% gain as an impressive rally in the Materials and Healthcare sectors of 20.2% and 15.2%, respectively, was offset by weakness in the Information Technology and Consumer Staples sectors, which fell 6.7% and 5.5%, respectively. Overall, 5 of 10 sectors finished the month in positive territory.

In the U.S., the S&P 500 posted a 0.4% gain this month, with 6 of 10 sectors ending the month in positive territory. The Energy and Materials sectors gained 8.7% and 4.9%, respectively while the Information Technology and Utilities sectors fell by 5.4% and 2.4%, respectively.

FIXED INCOME-SPECIFIC DEVELOPMENTS

The Bank of Canada (BoC) made its neutral stance clear by acknowledging that recent domestic economic data have been encouraging on balance, while remaining cautious with respect to the risks facing the global economy. At its April meeting, the BoC maintained the benchmark rate at 0.5% and boosted its 2016 gross domestic product (GDP) forecast to 1.7% from January's estimate of 1.4%. The BoC reiterated its view that low growth, the strengthening of the Canadian dollar and the reduced investment in Canada's energy sector were the main drivers of its decision to hold rates at the current low level. Amongst recently published economic data, the labour market, manufacturing and retail sales all posted better-than-expected numbers. 46,000 jobs were created in March, including a 19,000 job gain in Alberta that contributed to a lowering of the unemployment rate to 7.1% from 7.3%. Manufacturing grew 1.9% month over month, with durable manufacturing increasing 2.6% and retail sales posting a surprise gain of 0.4% in February, higher than expectations for a 0.8% decline. All these factors helped boost GDP growth to 1.5% on a year over year basis, in-line with the street's estimates. One indicator that was decidedly negative was the trade data, with exports falling 14% in March. This contrasted with the BoC Governor's comments that the Canadian economy is adjusting to low oil prices and a favourable exchange rate.

The Federal Open Market Committee (FOMC) is still not convinced about the strength of certain parts of the U.S. economy. It remains focused on persistently sluggish inflation and GDP numbers. The U.S. consumer price index (CPI) increased by only 0.1% in March and U.S. GDP came in lower than expected, at an annualized rate of 0.5% for the first quarter versus economists' expectations of 0.7%. GDP was impacted in part by the fall in housing starts, weak manufacturing data and a slowdown in household spending. On the other hand, the U.S. labour market remained strong in April as jobless claims unexpectedly decreased to the lowest level since 1973. Meanwhile, wages increased by 2.3% on an annual basis and real income rose at a solid rate. In general, consumer sentiment remains relatively high in the U.S. Nevertheless, the FOMC decided to keep the federal funds rate unchanged at 0.25% - 0.50% at its April meeting.

GLOBAL DEVELOPMENTS

Inflation and growth also remained in focus in Europe. The Eurozone GDP and labour market conditions slightly improved in February, with a drop of 0.1% in the joblessness rate to 10.3%, while GDP came in higher than expected at 1.6%. These Eurozone numbers mask the fact that there are still major discrepancies between regions, with Greece, Spain and Portugal still lagging behind the core European economies. Meanwhile, inflation expectations continue to be lacklustre in the region. Data released this month showed annual inflation in the region was -0.1% in March and underscores the difficulty the European Central Bank is encountering as it attempts to elevate inflation closer to its target of 2%. The ECB left its benchmark interest rate and deposit facility rate on hold at 0.0% and -0.4% respectively, and maintained its asset purchase program at €80 billion euros per month. ECB President Mario Draghi said that “the focus is now on the implementation of the measures decided” on March 10, suggesting that further easing measures might only come later this year, if necessary.

In China, manufacturing expanded for the first time in nine months as the nation's official PMI posted a larger-than-expected increase in March to 50.2 up from 49.0 in the previous month. Additionally, the GDP expanded at an annual pace of 6.7% in the first three months of 2016, in line with expectations and the official target growth range of 6.5% to 7%. This increase came on the back of an increasing debt to GDP ratio, which reached 237% in April. On the resources front, major commodities such as iron ore and oil moved up significantly in the month. Oil prices ended the month at ~\$46 a barrel, aided by weakness in the U.S. dollar and a decline in U.S. production that helped to reduce the crude inventory buildup. The rally in oil prices happened in spite of the meeting in Doha between OPEC and non-OPEC countries that ended without any formal output freeze agreement.

WORLD MARKETS

April Month-over-Month and Year-to-Date Performance

For the month of April, global markets were fairly mixed. Across North and South America, Brazil's Bovespa was up 7.7% while S&P 500 and S&P/TSX were up 0.4% and 3.7%, respectively. In Europe, Germany's DAX rallied 0.7% and U.K.'s FTSE increased by 1.4%. In Asia, Hong Kong's Hang Seng was the clear winner closing the month up 1.5% while India's Sensex rallied 1%, but these gains were dampened by poor showings in China's Shanghai Index and Japan's Nikkei, which fell 2.2% and 0.6%, respectively. Lastly, Australia's S&P/ASX 200 finished the month up 3.4%. Overall, the MSCI World Index increased by 1.6% for the month and is now up 1.5% for the year.
